What is DeFi?

Decentralized finance (DeFi) is the financial movement which leverages old centralized financial products into decentralized trustless and transparent protocols which run without intermediaries. DeFi puts users in full control of their own funds reducing the risk of loss due to hacks, locks by governing bodies, exit scams, and over regulation.

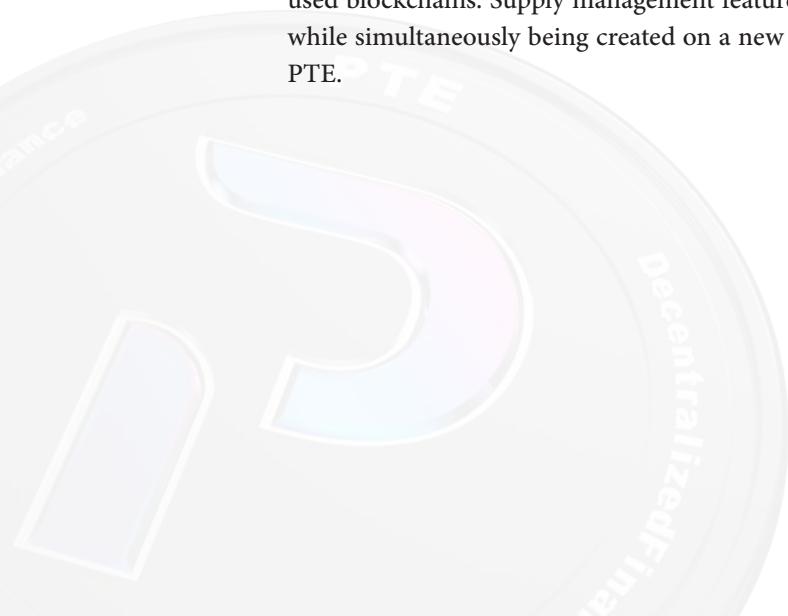

What is Peet?

Peet is a decentralized platform on which users can collateralize assets they own to be represented on the blockchain as stores of value. Simply put this means transforming anything of value into usable collateral to earn returns.

What is PTE?

PTE is the core utility, staking, and governing asset for the Peet Platform. Currently PTE exists as a BEP-20 compliant BSC token, and through nuls/nerve, already exists on the top 5 most used blockchains. Supply management features of PTE will burn tokens as they leave one chain while simultaneously being created on a new chain. The starting total supply will be 1,000,000 PTE.

### What is Yield Farming?

Yield farming is the ability to put assets to work in order to generate returns on those assets. The Peet Platform optimizes strategies to maximize return on yield farming opportunities across multiple blockchains, making sure users earn the highest returns possible while paying the lowest fees possible.

### What are Liquidity Rewards?

Liquidity Rewards are additional returns offered to those who provide liquidity to decentralized trading pools. Users contribute whichever asset they choose plus an amount of PTE with similar value in order to earn a share of trading fees plus an additional distribution of PTE. Because this is done in a decentralized manner a user's contribution can be withdrawn at any time to collect their earned rewards. The longer the contribution, and the higher the amount the more rewards are earned.

## The Interoperability of Blockchains

### The Problem

Most DeFi projects today exist solely on the Ethereum network. Fees can be high, transaction times long, and capital wasted by wrapping non-Ethereum assets to represent them on the Ethereum blockchain. This is not ideal for realizing the highest returns possible.

---

*From Da Hongfei, founder of Neo:*

*“I firmly believe that interoperability is the future of the blockchain industry. Within our current paradigm, both traditional and blockchain platforms exist as effectively isolated data silos — users and developers alike are restricted by each platform’s capabilities and limitations”*

*From Andy Ji, co-founder of Ontology:*

*“Cross-chain interoperability is becoming increasingly important as we focus on moving away from a siloed way of working...”*

---

### The Solution

Peet is adaptable, scalable, and PTE tokens are chain agnostic. PTE tokens exist on multiple blockchains and can exist on any future blockchain. Due to this, PTE tokens will take the "Path of Least Resistance" to arrive at their end destination, we call this POLR.

POLR means PTE tokens will utilize the chain with the lowest fees, and the most reasonable transaction times at the time of transfer. POLR importance of fee minimization vs transfer time is paramount. POLR is a feature of PTE and can be enabled by users who prefer one chain over another.

## Decentralized Finance and Asset Security

**The first true crypto authority with the goal of ending all BSC token scams.**

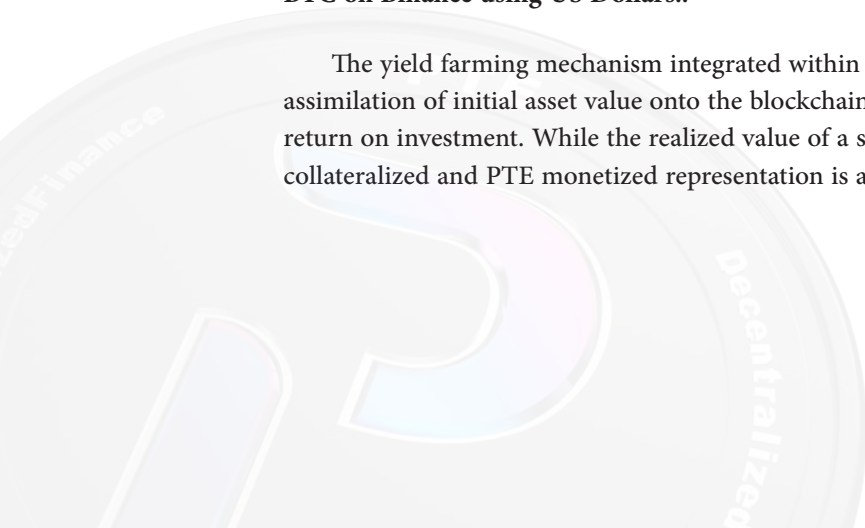

The Peet platform will serve as the first crypto authority for many reasons. For example, anytime a Binance Smart Chain token is deployed, we will automatically audit the source code and inform the necessary parties if there are any exploits or anomalies identified within the contract. If there are any exploits, or anything wrong with the code it could potentially result in users getting scammed and the loss of their assets. The goal of having true authority within the crypto space is to save people from scammers. In real life we have law enforcement agencies and investigators. If a party is stolen from they may inform the police and rely on their protection, but there is no such authority within the crypto space. Peet DeFi will solve this. Imagine our future, when we save tens of thousands of Binance customers from scams, and gain both recognition and endorsement. With these aforementioned goals as well as many more, the Peet platform is the conclusive objective of Peet Defi, and will be realized through the expansion and management of our development team and product offerings.

Another unprecedented goal that Peet Defi will accomplish, is the bridging of the gap between traditionally centralized financial products and their ever growing decentralized alternatives. This will be realized through multiple methods. As a case in point, the representation of assets which hold tangible value (ie: home equity, automobiles, precious metals, stock positions), collateralized via the Peet platform through any exchange, swap, dex or independent grantor, as well as the prospect of being able to do the same natively within the Peet ecosystem.

**In other words..**

**. “The Peet platform will serve as a bridge between both blockchains and exchanges. PTE holders will be able to use the Peet platform, and purchase BTC on Binance (or any desired exchange) for example, via the Peet platform, PTE holders will be capable of purchasing BTC on Binance using US Dollars..”**

The yield farming mechanism integrated within the Peet platform system realizes the assimilation of initial asset value onto the blockchain, and opens the pathway for the maximal return on investment. While the realized value of a specific asset class can remain stagnant, the collateralized and PTE monetized representation is able to maximize gains.

## Tokenomics and Distribution

With the Peet Defi ecosystem PTE tokens have a total supply of 1,000,000.

Contract Address: 0x424B50dcB78f459d11A95bedDd13788296281987

Tokenomics: The functionality of token distribution for the PTE contract is as follows.

- 5% Tax for every transaction
  - 2% Goes to liquidity
  - 2% Redistributed to holders
  - 1% Burned

Liquidity Locked  
150,000 PTE Team Wallet Locked

## Glossary of Terms

BEP-20 - The Binance Smart Chain native token.

BSC - Binance Smart Chain

Blockchain - a ledger that records digital transactions publicly and permanently

Btc - Bitcoin

Defi - Short for “Decentralized Finance” , blockchain finance that does not on any sort of financial intermediary

Dex - A decentralized cryptocurrency exchange that functions without an intermediary

Peet Platform - The operational platform of Peet DeFi.

POLR - Path of Least Resistance

Pte - The native token of the Peet Platform and Peet DeFi.

Tokenomics - how cryptocurrencies function within their ecosystem

## User Guide

You can currently purchase \$PTE through the following outlets. Additional methods will be listed as released.

Pancake Swap -

<https://exchange.pancakeswap.finance/#/swap?outputCurrency=0x424b50dcb78f459d11a95beddd13788296281987&inputCurrency=BNB>

Bogged.finance - <https://bogged.finance/>

[swap?tokenIn=BNB&tokenOut=0x424b50dcb78f459d11a95bedDd13788296281987](https://bogged.finance/swap?tokenIn=BNB&tokenOut=0x424b50dcb78f459d11a95bedDd13788296281987)

PooCoin Swap - <https://poocoin.app/>

[swap?outputCurrency=0x424b50dcb78f459d11a95beddd13788296281987](https://poocoin.app/swap?outputCurrency=0x424b50dcb78f459d11a95beddd13788296281987)

The pre-requisite to acquiring and holding \$PTE is a Cryptocurrency wallet. There are many options available and dependent upon the utility requirements of the user. A simple option is to use Trust Wallet. Instructions on setting up a Trust Wallet can be found here.

<https://community.trustwallet.com/t/how-to-create-a-multi-coin-wallet/41>

Another wallet alternative is Metamask. Instructions can be found here.

<https://metamask.io/>

PancakeSwap - Instructions for setting up trading in pancakeswap can be found here.

<https://docs.pancakeswap.finance/products/pancakeswap-exchange/trade-guide>

The Contract Address for \$PTE is 0x424b50dcb78f459d11a95beddd13788296281987
